Dear
Spandex Ltd
1600 Park Avenue Aztec West
BS32 4UA Bristol

Acceptance Data
Subject of the test: Polymers
Transport: Customer
Date of arrival: 22/05/2020  Time of arrival: 14.04
Acceptance date: 22/05/2020

Sample data
Description: ImagePerfect, SafeTouch

Sampling data
Sampling by: Customer
Place: Customer location

The analytical results are exclusively referred to the sample.

Representation of a Test Report signed electronically in accordance with current legislation.

This document can not be reproduced in part without the written permission of the laboratory.

Laboratory management system certified UNI EN ISO 9001: 2015 by CSGA with the No. 14270. Recommended by AIC for the analysis of quantification of gluten in food matrices. Registrated laboratory for the analysis of food contact materials intended for export to Japan.
Laboratory registered in the list of regional laboratories carrying out analysis in the context of self-control procedures for Food Industries No. 52. It is the responsibility of the OSA to communicate the warnings to the bodies in charge.
# Test report n°: 20LA07543 of 22/06/2020

## Parameter - Specification

If the sampling is not the responsibility of 3A Laboratories srl, the latter declines all responsibility with regard to sampling information as provided by the customer, the test results refer only to the sample as received. When these data include measurements that affect the measurement unit, the results expressed are obtained by processing them. The Acceptance Data is the responsibility of the Laboratory while the sample data are the responsibility of the customer. If the sample is not suitable but the customer chooses to continue anyway, the laboratory declines all responsibility for the results that could be influenced by the deviation.

**LEGEND:**
- **U.M.** = Unit of measurement; **(Sup)** = upper limit; **(Inf)** = Lower Limit; **LoQ** = limit of quantification, it is the lower limit of concentration above which it is possible to obtain a quantitative measurement instrumentally; in microbiology the LoQ is of a theoretical nature; **LoD** = limit of detectability, is the lower limit of concentration below which the sample cannot be detected; in qualitative analyzes it represents the minimum concentration at which an analyte can be determined or not; **NR** = not detectable, indicates a value lower than LoD; **NR** = not detectable, indicates a value lower than LoD/2 = x or > x respectively indicate a value lower or higher than the measuring range of the test, where x is the result.

(2): Indicates a change from the previous version of the Test Report.

(ie): Indicates that the parameters/activities are performed in subcontracting.

UNLESS OTHERWISE SPECIFIED: Quantitative microbiological tests are performed on single replica and two consecutive dilutions in accordance with UNI EN ISO 7218: 2013 (with the exception of the analysis of water and MPN); the results of this test report are not corrected for recovery factors (R) as the values of recovery are in the tolerance.

The analytical results are exclusively referred to the sample.

**Representation of a Test Report signed electronically in accordance with current legislation.**

This document cannot be reproduced in part without the written permission of the laboratory.

Laboratory management system certified UNI EN ISO 9001: 2015 by CSQA with the No. 14270. Recommended by AIC for the analysis of quantification of gluten in food matrices. Registered laboratory for the analysis of food contact materials intended for export to Japan.

Laboratory registered in the list of regional laboratories carrying out analysis in the context of self-control procedures for Food Industries No. 52. It is the responsibility of the OSA to communicate the warnings to the bodies in charge.
